Summary

A passionate learner seeking an opportunity to gain professional experience, enhance skills, through real-world projects in frontend development.

Projects

Personal Portfolio Site || *HTML, CSS, Javascript, Git, VS Code*

- A Portfolio Site is a webpage I created using HTML, CSS, and JavaScript to showcase my professional presence with experience and skills.
- <https://github.com/abhishek-hyangol/Personal-Portfolio> 🔗

Blog Site || *HTML, TailwindCSS, Javascript, React, Appwrite*

- Built a responsive blog platform using React and TailwindCSS, ensuring seamless user experience across devices.
- Implemented user authentication with secure login/register features using Appwrite
- Enabled dynamic data operations (create, read, update, delete posts) through real-time backend integration.
- Applied React Hook Form for structured form handling and robust validation, including custom email validation using Regular Expressions (RegExp).
- Managed global state with Redux, enhancing performance and maintainability.
- Used React Router for smooth client-side navigation and route protection for authenticated users only.
- [Live Demo](#) 🔗

Admin Dashboard || *HTML, TailwindCSS, Typescript, React, TanStack*

- Developed a responsive admin dashboard using React and TailwindCSS for sleek and adaptive design.
- Integrated Chart.js 2 to visualize analytics through bar and pie charts, enhancing data representation.
- Utilized TanStack Table to build dynamic and customizable data tables with sorting and filtering functionalities.
- Focused on layout structuring, UI consistency, and component reusability.
- Built with dummy data to simulate real-world admin panel behavior, laying the groundwork for future backend integration.
- [Live Demo](#) 🔗

Microsoft HomePage Clone || *HTML, TailwindCSS, VsCode, git, Vite*

- I cloned the frontpage of Microsoft implementing HTML and TailwindCSS.
- Throughout this project i learned how to build a responsive site and create a navigation bar.
- And also I learned how to implement a carousel and design buttons.
- <https://github.com/abhishek-hyangol/Microsoft-website-clone> 🔗

Testimonial Sliders || *HTML, CSS, React*

- Developed a dynamic review section that fetches and displays reviews from a JSON file.
- Implemented smooth transitions and responsiveness using TailwindCSS.
- [Live Demo](#) 🔗

FAQ Accordion || *HTML, CSS, React*

- Designed and developed a dynamic and responsive FAQ section where clicking a question reveals the answer.
- Utilized React state management for interactive toggling of answers.

- [Live Demo](#)

Monument Recognition Application || *Figma, Overleaf, Python, Kotlin, Android Studio, Tensor Flow, PYtorch, Azure, PostgreSQL, Git, VS Code, Postman*

- Collaborative Mobile application project made to fulfill the bachelor degree in Computer engineering.
- The project involved gathering image data of various monuments and performing preprocessing tasks.
- Mobile application captures the image and provides details about the monuments.
- We trained MobilenetSSD-V2 model and embedded it with mobile application which helped in detection of monuments.
- We trained YoloV7 model and deployed it in Azure cloud platform which helped in recognition of monuments.
- <https://github.com/abhishek-hyangol/Monument-Recognition-System>

AR Tour Companion with Voice Assistance || *Figma, Overleaf, Python, Kotlin, Mapbox, Android Studio, Transformer, Azure, PostgreSQL, Git, VS Code, Postman*

- Collaborative mobile application project made to fulfill the bachelor degree in Computer engineering.
- This is a mobile application that enables users to choose a destination and then displays augmented reality (AR) navigation signs to guide them to their selected destination.
- After reaching destination through voice command we can query about the monuments.
- The project involved gathering question answer data about various monuments and performing preprocessing tasks.
- The android app integrates Mapbox Vision SDK, Navigation SDK and Direction API which helps in rendering navigation signs.
- We deployed a CNN-LSTM model for monument recognition and a Transformer model for question answering on an Azure server.
- <https://github.com/abhishek-hyangol/AR-TOUR-COMPANION-WITH-VOICE-ASSISTANCE>

Education

Khwopa College of Engineering, Bachelor in Computer Engineering
Bagiswori Higher Secondary School, Plus two in Science

2019-2024
 2017-2019

Certifications

Certified Cloud Practitioner || *Amazon Web Service*

- Learnt about the Cloud Computing.
- Got knowledge about Cloud services and its billing strategy.

Skills

- Languages (Python, Javascript)
- Web Development (HTML, CSS, TailwindCSS)
- Database (MySQL)
- Version Control (GitHub)
- Cloud Computing (AWS)
- Libraries(React)
