PROFILE

Recent Computer Engineering graduate with expertise in web development, database management, and AI/ML. Experienced in building scalable web apps, designing APIs, and optimizing system performance. Skilled in developing high-performance systems with a strong foundation in database administration, network security, and predictive modeling. Passionate about creating innovative and efficient software solutions.

SKILLS & PROFICIENCIES

HTML5, CSS3 and Js
SQL, MongoDB
Python
Pandas and NumPy

CSS Preprocessors: SASS/SCSS
Git and Github
AI/ML: LSTM, CNN, NLP
Networking Fundamentals

React, Node.js
RESTful APIs
Scikit-learn, TensorFlow
VMware environment expertise

PROFESSIONAL EXPERIENCE

Asterdio Inc.

Dec 2024 – Feb 2024

Full-Stack Developer Internship

- Developed responsive websites with HTML, SASS, and JavaScript.
- Built interactive, data-driven web apps using with React, Node.js, TypeScript, and MongoDB.
- Implemented Sequelize ORM for handling SQL databases in projects.
- Designed high-performance RESTful APIs with Node.js and Express.
- Collaborated with teams using Git, Jira, and Slack for efficient project delivery in an Agile environment.

Cloud Himalaya Pvt. Ltd

May 2024 – Oct 2024

Network Engineer

- Design, install, and configure network infrastructure (routers, switches, firewalls).
- Monitored and optimized network performance, troubleshooting issues to minimize downtime.
- Deployed and managed VMs using VMware ESXi and vCenter for efficient resource utilization.
- Configured pfSense and Check Point firewalls for secure network operations.

Code Rush Pvt. Ltd

Mar 2024 – Jul 2024

DBA Apprenticeship

- Gained in-depth knowledge of relational and non-relational database models.
- Designed and optimized SQL and NoSQL database structures for improved performance.
- Explored and applied advanced indexing, query optimization, and schema design techniques.
- Implemented database normalization techniques to optimize storage and reduce redundancy.

PROJECTS

Online Car Buying Platform (Self-Improvement Journey)

Developed an online car marketplace with responsive React + SCSS front-end. Implemented robust backend with Express.js and RESTful APIs, and used MongoDB with Mongoose for efficient data handling. Supports outright car purchases and EMI options, with features like a loan calculator, currency converter, and key pages like landing, detail, profile, and listing. Currently running locally, with deployment plans in progress.

Sorting Algorithms Visualizer (DSA Learning Journey)

Developed interactive visualizers for various sorting algorithms, delivering an engaging experience through web application built with HTML, CSS, and JavaScript. Deployment: <http://pragyashrestha1.com/np/>

Developed a system using CNN and BiLSTM for temporal analysis of video frames to detect deepfakes. Evaluates the probability of manipulation and provides binary classification with React based front-end interface for real-time feedbacks.

Trained a detection model using YOLOv4 with deepSORT for vehicle tracking and prepared a custom dataset, achieving a mean average precision of 98%.

Focused on predicting sentiment in movie reviews using the IMDB dataset and LSTM, achieving an accuracy of 88.16% through advanced machine learning techniques to capture emotional nuances in textual data.

Bachelor in Computer Engineering 2019 - 2024
Khwopa College of Engineering, Libali
T.U, Percentage: 77.07%

Python for Data Science, AI & Development
